

MAURICE JOHNSON

Senior Software Engineer | Java, Spring Boot, Distributed Systems

203-873-8099 • maurice.johnson9911@gmail.com • mbjohnsonjr.com • linkedin.com/in/mauricej95 • github.com/johnsonmau

EXPERIENCE

Oddball • Remote / McLean, VA

Senior Software Engineer | Aug 2025 – Present

- Design and ship Java 21 / Spring Boot API endpoints and backend services for MyHealtheVet, the VA's primary health portal serving millions of Veterans nationwide.
- Own technical design for backend features end to end: author design docs, evaluate integration approaches across upstream VA systems, and align solutions with federal healthcare compliance requirements before implementation.
- Led Java runtime and dependency upgrades across backend services, resolving compatibility breaks and closing outstanding security advisories with no production downtime.
- Instrumented backend APIs with Grafana metrics and dashboards, surfacing latency and error-rate regressions in production before they reached Veterans.
- Expanded unit and integration test suites across critical Veteran-facing workflows, raising coverage and reducing regression escapes into production.

The Hartford Financial Services Group • Hartford, CT • Feb 2018 – Aug 2025

Software Engineer, Enterprise Risk Management | Jun 2022 – Aug 2025

- Designed and built Java / Spring Boot backend services powering enterprise risk models, improving system throughput 30%.
- Decomposed a monolithic risk platform into independently deployable Java microservices, reducing deployment risk and improving feature delivery speed 25%.
- Built Python automation for data refreshes, usage reporting, and stale-job alerting, eliminating 10+ hours/week of manual monitoring and reducing MTTR 40%.

Associate Software Engineer, Enterprise Risk Management | Sep 2019 – May 2022

- Built backend microservices in Java / Spring Boot powering risk management workflows for business-critical internal systems.
- Shipped in a high-velocity CI/CD workflow across GitHub, Jenkins, uDeploy, and OpenShift; wrote JUnit and Selenium suites that raised deployment confidence and reduced production defects.
- Contributed React and JavaScript frontend work for internal risk dashboards used daily by analysts and team leads.

Junior Developer, Enterprise Publishing Management | Feb 2018 – Aug 2019

- Delivered Java backend modules for internal publishing tools supporting Personal and Commercial Lines; partnered with QA and Production Support to triage and resolve defects.

PRODUCTS & INFRASTRUCTURE

- **Offrrd** (offrrd.com, iOS App Store): AI-powered job search assistant designed, built, and shipped solo. Java 21 / Spring Boot backend with PostgreSQL, Redis, Stripe and RevenueCat billing, and the Anthropic Claude API for resume and cover-letter generation; React Native + Expo client shipping iOS and web from one codebase. Live in production on my own self-hosted infrastructure.
- **Monster Tag** (in development): Real-time timing and collection game with a server-authoritative Java 21 / Spring Boot backend on PostgreSQL and Redis, React Native + Expo client, and offline play with server reconciliation.
- **mbjohnsonjr.com**: Developer portfolio and project archive built with Next.js, TypeScript, Tailwind CSS, and Framer Motion. Full technical write-ups for every project above live here.
- **Home Lab / Production Infrastructure**: Operate 6 nodes running 50+ Docker services, hosting live public traffic for my own products behind Nginx, CrowdSec, and Cloudflare Tunnel. Run a self-hosted DevOps loop (Gitea, Jenkins, Nexus) and observability stack (Prometheus, Grafana, Uptime Kuma) across every node.
- **nullpointerbro** (nullpointerbro.com): Java and infrastructure tutorials across YouTube and TikTok: 174K+ views on my most-watched Spring Boot tutorial, 160K+ TikTok likes, 2K+ subscribers.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, TypeScript, SQL

Backend & Data: Spring Boot, Hibernate, REST APIs, Microservice Architecture, PostgreSQL, Oracle, SQL Server, MySQL, Redis

Infrastructure & CI/CD: Docker, AWS ECS, OpenShift, Nginx, Jenkins, GitHub Actions, Linux (Ubuntu Server)

Observability & Testing: Grafana, Prometheus, JUnit, Selenium, Karate

Frontend: React, React Native, Expo, Next.js, Tailwind CSS

EDUCATION

M.S., Computer Information Technology (Computer Science concentration), Central Connecticut State University, 2025

B.S., Computer Science, Eastern Connecticut State University, 2017
